Forage

PROGRAM
GenAI Powered Data Analytics Job Simulation

DATE
September 10th, 2026

SIGNATORY
Tom Brunskill, Co-Founder of Forage

Practical Work Completed

The certificate highlights four practical areas:

- Exploratory data analysis and risk profiling — examining customer data to identify patterns and risk signals.
- Predicting delinquency with AI — using predictive thinking to identify customers at higher risk of delinquency.
- Business report and data storytelling for collections strategy — translating analytical findings into clear business recommendations.
- Implementing an AI-driven collections strategy — designing a scalable approach that combines AI automation with responsible decision-making.

Key Capabilities Demonstrated

Exploratory Analysis

Identify patterns, trends, data quality considerations and risk segments.

Predictive Analytics

Frame a classification approach for forecasting customer delinquency risk.

Business Storytelling

Convert analytical findings into concise stakeholder-focused recommendations.

Responsible AI

Consider fairness, explainability, compliance and human oversight.

What the Simulation Connected

The work connects analytics to practical collections decision-making.

- Customer-level financial and behavioral signals can support risk prioritization.
- Predictive insights can guide which customers receive earlier or more targeted interventions.
- Business reporting turns model findings into actions that collections teams can understand and use.
- An AI-driven collections strategy should balance operational efficiency with fairness, explainability, compliance and human oversight.

Analytics → Prediction → Business Recommendation → Responsible AI Strategy

Certificate Snapshot

Completion details

- Name: Anurag Kumar Singh
- Program: GenAI Powered Data Analytics Job Simulation
- Completion date: September 10th, 2026
- Issued by: Forage
- The certificate confirms practical work in four areas shown on the credential.
