

Certificate & Learning Report

GenAI Powered Data Analytics Job Simulation — Tata × Forage

Participant	Anurag Kumar Singh
Roll Number	2410031500
Section	3CSE8
Program	GenAI Powered Data Analytics Job Simulation
Credential	Certificate of Completion
Completion Date	September 10th, 2026
Issued By	Forage
Signatory	Tom Brunskill, Co-Founder of Forage

1. Overview

The certificate confirms completion of the GenAI Powered Data Analytics Job Simulation during September 2026. The program focused on applying data analytics and generative AI concepts to a customer-risk and collections context.

2. Practical Areas Covered

- Exploratory data analysis and risk profiling — examining customer information to understand risk patterns and profiles.
- Predicting delinquency with AI — applying predictive-model thinking to identify customers who may be at higher risk of delinquency.
- Business report and data storytelling for collections strategy — translating analytical findings into clear business-oriented insights.
- Implementing an AI-driven collections strategy — connecting analytical and predictive insights with a responsible collections approach.

3. Learning & Capability Summary

The completed simulation demonstrates a workflow that moves from customer data exploration to risk prediction, then from predictive findings to business recommendations and an AI-driven collections strategy.

Certificate & Learning Report

Practical Skills and Business Relevance

4. Key Skills Demonstrated

- **Exploratory Analysis:** Understanding customer financial and behavioral data and identifying useful risk signals.
- **Risk Profiling:** Organizing customer characteristics around potential delinquency risk.
- **Predictive Analytics:** Structuring a model-based approach for forecasting delinquency.
- **Data Storytelling:** Communicating analytical results in a concise format that supports business decisions.
- **AI-Driven Strategy:** Connecting predictions with targeted collections actions and responsible AI considerations.

5. Business Application

The simulation is oriented toward a collections use case. Customer-level financial and behavioral information can be analyzed to identify risk, while predictive insights can help collections teams prioritize attention and design more targeted interventions.

6. Responsible AI Perspective

A responsible collections approach should not rely on automated predictions alone. The work supports understandable recommendations, appropriate human oversight, and careful consideration of fairness and responsible use when applying AI to customer decisions.

7. Credential Record

The certificate identifies Anurag Kumar Singh as the participant and records a Certificate of Completion for the GenAI Powered Data Analytics Job Simulation. It is dated September 10th, 2026 and issued by Forage.
